

BAGUS KURNIAWAN

SOFTWARE ENGINEER | BACKEND & CLOUD FOCUS

Email: gedebagus@gmail.com | GitHub: github.com/kurngxtech | Portfolio: kurngxtech.dev | Indonesia

PROFESSIONAL SUMMARY

Software Engineer with a solid foundation in Information Systems and verified client-facing production delivery experience. Specializes in building reliable full-stack web applications, RESTful APIs, and relational database systems with PostgreSQL. Demonstrated hands-on experience deploying containerized services with Docker, implementing Row-Level Security (RLS), and authoring end-to-end automated tests with Playwright. Dedicated to clean architecture, security, and cloud scalability.

WORK EXPERIENCE & PRODUCTION DELIVERY

Full-Stack Software Engineer (Internship / Client Project)

June 2025 - Present

Saint Ink Tattoo Studio | *Production Client Deployment*

- Engineered end-to-end booking and artist showcase web application using React, TypeScript, Tailwind CSS, and Supabase.
- Designed and implemented PostgreSQL relational schemas with Row-Level Security (RLS) policies for multi-tenant data isolation.
- Built automated End-to-End (E2E) testing suites using Playwright, verifying critical appointment scheduling workflows.
- Containerized frontend and backend services using Docker, ensuring reproducible staging and production environments.
- Optimized client-side rendering and asset delivery, cutting initial page load time by 35% across mobile networks.

KEY TECHNICAL PROJECTS

Cinema Ticketing System

Stack: TypeScript, Node.js, PostgreSQL

- Architected a scalable seat reservation platform with transactional booking handling to prevent double-booking conflicts.
- Implemented secure JWT authentication and role-based access control (RBAC) for cinema managers and customers.

SmartWaste IoT & Real-time Monitoring Dashboard

Stack: IoT Sensors, Python, Web Dashboard

- Built an IoT telemetry pipeline collecting fill-level and sensor metrics, aggregating real-time analytics on a web dashboard.
- Designed threshold-based notification alerts to optimize municipal waste pickup routes and reduce fuel expenditure.

Android Health & Activity Tracking Application

Stack: Kotlin, Android SDK, SQLite

- Developed native Android application for monitoring daily fitness activities with local persistence and background telemetry.
- Implemented clean MVVM architecture ensuring robust testability and responsive UI state management.

EDUCATION

Bachelor of Information Systems

Expected Graduation: 2026

Cumulative GPA: 3.82 / 4.00 | Focus: Software Engineering, Database Systems, Computer Networks

TECHNICAL SKILLS & COMPETENCIES

Languages & Core:	TypeScript, JavaScript (ESNext), Python, SQL, HTML5, CSS3 / Modern Tailwind CSS
Backend & Frameworks:	Node.js, Express, React, Vite, Astro, RESTful API Design, Microservices Concepts
Databases & Storage:	PostgreSQL, Supabase, Row-Level Security (RLS), Schema Migrations, Redis Caching
DevOps & Infrastructure:	Docker, Containerization, Git, GitHub Actions CI/CD, Linux Server Administration
Testing & Quality:	Playwright (E2E Automated Testing), Unit Testing, Lighthouse Performance Auditing
